Times are UTC. For US clocks subtract 4 to 7 hours in daylight time (Mar 14 to Nov 7) and 5 to 8 in standard time, which puts June's and November's full moons on the evening before.

* Penumbral lunar eclipse, a slight dimming. The moon looks full for a night on either side of the date.

THE PHASES

As seen from the Southern Hemisphere: waxing moons are lit on the left, waning on the right.
